

CLAIM SET AS AMENDED

1. (Currently Amended) An outlet airflow direction control unit, comprising:
 - a frame having an inlet and an outlet, said outlet being provided on a peripheral wall with a plurality of radially projected fluid control elements; and
 - a fan being supported in said frame;
 - ~~whereby~~ wherein when said fan is rotated to cause an amount of fluid to flow into and out of said frame via said inlet and said outlet, respectively, said fluid control elements provided in said frame are adapted to control a flow direction of said fluid flown out of said outlet.
2. (Original) The outlet airflow direction control unit as claimed in claim 1, wherein said fluid control elements are control blades.
3. (Original) The outlet airflow direction control unit as claimed in claim 1, wherein said fluid control elements are ribs.
4. (Currently Amended) An outlet airflow direction control unit, comprising:
 - a frame having an inlet and an outlet, said inlet being provided on a peripheral wall with a plurality of radially projected fluid control elements; and
 - a fan being supported in said frame;
 - ~~whereby~~ wherein when said fan is rotated to cause an amount of fluid to flow into and out of said frame via said inlet and said outlet, respectively, said fluid control elements provided in said frame are adapted to control a flow direction of said fluid flown out of said outlet.
5. (Original) The outlet airflow direction control unit as claimed in claim 4, wherein said fluid control elements are control blades.

6. (Original) The outlet air flow direction control unit as claimed in claim 4, wherein said fluid control elements are ribs.
7. (New) The outlet airflow direction control unit of claim 2, wherein said control blades being configured as one of T-shaped, L-shaped, and reverse L-shaped.
8. (New) The outlet airflow direction control unit of claim 5, wherein said control blades being configured as one of T-shaped, L-shaped, and reverse L-shaped.
9. (New) The outlet airflow direction control unit of claim 1, wherein said fan including a hub, and said fluid control elements to direct said fluid radially inward behind the hub when flowing out of the outlet.
10. (New) The outlet airflow direction control unit of claim 4, wherein said fan including a hub, and said fluid control elements to direct said fluid radially inward behind the hub when flowing out of the outlet.
11. (New) An outlet airflow direction control unit, comprising:
 - a frame having an inlet, an outlet, and a peripheral wall, said outlet being provided on the peripheral wall with a plurality of radially, inwardly projected fluid control elements being located adjacent to the outlet on an inner surface of the frame;
 - a fan being supported in said frame, and disconnected from the fluid control elements;
 - wherein said fan being rotatable to direct an amount of fluid into and out of said frame via said inlet and said outlet, respectively, said fluid control elements provided in said frame, downstream from the fan, to control a flow direction of said fluid flowing out of said outlet.
